

# Verizon Innovation Labs

Real-world solutions for  
enterprise customers

Technology is advancing more rapidly than ever. Verizon Innovation Labs can help ensure your team doesn't get left behind by providing an exclusive opportunity to learn about the latest technology driven use cases.

Our team of experts will work with your team to explore how 5G and edge computing will impact your employees, your customers and your business.

Visit our world-class facilities – in Boston, San Francisco, and Los Angeles – to learn about wireless networking, emerging technologies and how our testing and validation environments can help accelerate the delivery of business outcomes.

## Explore what is possible now.

See demonstrations of emerging technology and discover the art of the practical. Learn about use cases powered by sensors and automation, computervision, Augmented Reality (AR) and Virtual Reality (VR), Industry 4.0, robotics and more.

## Participate in a strategy session.

We can help you identify trends and build better products to position you as leaders in your industry. Our fully customized workshops are designed to propel your business forward.

## Accelerate application development.

Whiteboarding and solution conversations with our experts enable you to explore your current environment, your future objectives and the most suitable solutions to help deliver ROI.

## Leverage our Labs as a Service.

Work with leading experts to troubleshoot emerging connected technologies and conduct proof of concept testing.

Our team of engineers are experts in key technologies that are applicable across industries: manufacturing, health care, automotive, public safety, retail, media and entertainment and beyond.

## Enhance your technology solutions.

Test concepts and products in a controlled 5G environment.

- **Private Networks + MEC sandbox:**  
Validate throughput and latency.
- **Conduct functional testing:**  
Access radio frequency (RF) shielded rooms to conduct special testing.
- **Mobile Labs as a Service:**  
Conduct trials in the field with our controlled network.
- **5G Vehicle Lab:**  
Real-time testing of all connected in-vehicle solution components – device, network, management and applications.
